## New York State Coincident Index

Source: Federal Reserve Bank of Philadelphia

### New York State Coincident Index

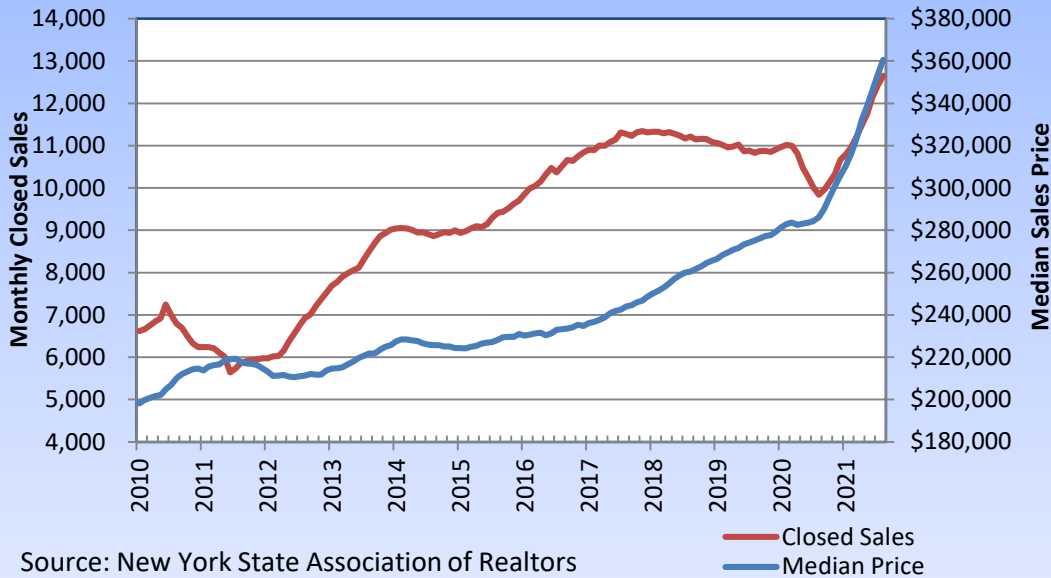

July 2021	120.3
June 2021	119.6
July 2020	99.0

**About the Data:** The coincident indexes combine four state-level indicators to summarize current economic conditions in a single statistic. The four state-level variables in each coincident index are nonfarm payroll employment, average hours worked in manufacturing by production workers, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average). The trend for each state's index is set to the trend of its gross domestic product (GDP), so long-term growth in the state's index matches long-term growth in its GDP. A dynamic single-factor model is used to create the state indexes. Indexed to 2007 annual average. Values are subject to monthly revision.

## Value of All New York Merchandise Exports

	Value (Million)
July 2021	\$6,037
June 2021	\$6,311
Change from last month	-4.4%
July 2020	\$4,544
Change from last year	32.9%

**About the Data:** Data are supplied by WISER Trade based on the U.S. Department of Commerce, Census Bureau, State Origin of Movement Series (OM). The OM series comes from documentation filed by the exporter with U.S. Customs. This series is defined as 1) the state where the product began its journey to the point of export, or 2) the state of consolidation of shipments, or 3) the state of greatest value in the case of consolidation, or 4) the state of a foreign trade zone.

The OM state provides a close approximation to state of production for manufactured goods. It is not very reliable for certain agricultural and other non-manufactured goods because they can be credited to the major port states. For manufactured goods it may also capture the state of consolidation or the state of a broker or wholesaler.
