

As described in the *City Environmental Quality Review (CEQR) Technical Manual*, all new structures requiring heating and cooling are subject to the New York City Energy Conservation Code. Therefore, the need for a detailed assessment of energy impacts is limited to projects that may significantly affect the transmission or generation of energy. According to the *CEQR Technical Manual*, a detailed assessment of energy impacts is only required for projects that would significantly affect the transmission or generation of energy or that would result in substantial consumption of energy. The proposed project would not affect the transmission or generation of energy. It is expected that the proposed project, upon completion of Phase II, would consume approximately  $3.7 \times 10^8$  million British Thermal Units per year. This would not be considered a significant demand for energy. Therefore, the proposed project would not result in significant adverse impacts to energy supply or consumption, and no further analysis is warranted. \*
