

### **A. INTRODUCTION**

This appendix provides the technical memorandum which details the planning assumptions included in the methodology for future parking utilization. Significant factors discussed in the methodology include proposed parking requirements for the zoning action, anticipated parking availability for unique structures, and trip assignments for private autos, taxis, and trucks.

This second section of this appendix presents detailed calculations of existing off-street parking capacity and utilization by parking facility. The final section of this appendix includes a spreadsheet summarizing the overall existing and projected parking utilization by analysis period, including the amount of parking to be created in the Future without the Proposed Action or replaced in the Future with the Proposed Action. This final sheet also presents the conclusions of the parking analysis. Each analysis period is calculated individually and the significant proposed land uses are highlighted, including the proposed rezoning action, expansion of the Convention Center, relocation of Madison Square Garden, and construction of the Multi-Use Facility.

**MEMORANDUM**

**TO:** G. Price, NYC Department of City Planning  
M. Amjadi, NYC Department of City Planning

**FROM:** S. McMillan / E. Metzger

**DATE:** October 16, 2003

**RE:** Preparation of a Draft and Final Environmental Impact Statement and Provision of Transit Engineering Services for the Proposed No. 7 Subway Extension-Far West Midtown Manhattan Rezoning

**SUBJECT:** Parking Assumptions and Related Traffic Assignment Methodology

**CIN:** MTA-NYCT/CM 1189R-C26501-00-C-1.00-DCP-03F-1645

---

### **Introduction**

Several assumptions have been made to assign the project-generated traffic to/from the development sites. The critical assumption is that zoning regulations will be developed by the Department of City Planning (DCP) to include parking requirements to meet the projected parking demand in order to avoid a future parking shortfall in the rezoning area. Preliminary parking rates have been developed based on this overlying assumption in order to assist in the development of traffic assignments.

### **Parking Availability**

Based on direction from DCP, the following assumptions have been made regarding the future availability of parking at the development sites:

- Site 1 – Parking will be limited to the addition of 450 spaces.
- Site 31 – Parking will be limited to 80% of the preliminary parking rates because 20% of this site would be decked.
- Sites 2, 4, 6, 34, 45 – No parking will be provided because these sites would be fully decked.
- Jacob Javits Convention Center (Convention Center) – 350 public parking spaces will be provided as part of the proposed hotel development. The proposed parking in the marshalling yards area will not be publicly accessible.
- Multi-Use Facility – No public parking will be provided.
- Midblock Boulevard – A 950-space underground parking facility will be provided with a vehicular entrance at 36<sup>th</sup> Street. It is assumed that the facility will provide pedestrian access to adjacent development sites (including sites 1 and 6).
- All Other Development Sites – Sufficient parking capacity will be provided to meet site-generated parking demand.

The attached table indicates how the midday parking demand is expected to be distributed for sites with limited or no parking availability. Parking demand during the midday period is anticipated to represent the worst-case scenario, as it is the peak for the most parking generators. For all other analysis periods, site-generated traffic will be assigned to parking facilities based on the proportions developed from the midday parking demand.

## **PB Team**

NYCT – Number 7 Extension Project  
2 Broadway-5<sup>th</sup> Floor, Mailbox 519  
New York, NY 10004  
Fax: 646-252-2063

Additional parking accommodation assumptions include:

- All traffic generated by a site will be assigned to the parking facility at that site if there is sufficient capacity. If there is no parking facility on the site or insufficient parking capacity, then the traffic will be assigned to nearby parking facilities with available capacity.
- Incremental parking demand associated with Madison Square Garden, the Convention Center, and the Multi-Use Facility will be assigned to nearby parking facilities with available capacity during the special event analysis periods.
- Some of the existing parking demand for the Convention Center will shift to parking facilities with available capacity as several existing parking lots will be displaced by the proposed action. As this shift will be accommodated by new parking facilities in the same area, this will not result in a change to the existing balanced traffic network.

### **Parking Facility Entrances: Auto Assignments**

The location of the entrances to the off-street parking facilities will be based on the following logical assumptions:

- As part of the proposed rezoning and redevelopment, most crosstown streets surrounding the Midblock Boulevard will have sidewalks widened by either five or ten feet. Parking facility entrances for the sites surrounding the boulevard will be assumed on the crosstown street with the smaller proposed sidewalk widening.
- Parking facility entrances will not be assumed on 34<sup>th</sup> or 42<sup>nd</sup> Streets if a development site also has frontage on a second crosstown street.
- Where possible, entrances to parking facilities will assumed be on crosstown streets instead of avenues.

### **Loading Docks: Truck Assignments**

At sites with parking facilities, truck loading/unloading locations will be assumed along the same blockface as the parking facility entrance. At sites without parking facilities, trucks will be assigned to/from a blockface using the same assumptions as the parking facility entrances described above.

### **Passenger Drop-off/Pickup Locations: Taxi Assignments**

The drop-off/pickup locations for taxi trips will be assumed at one of the four corners of the development sites.

### 2003 Existing Off-Street Parking Conditions
